Which products earn their place?

Product performance for Wide World Importers, January 2013 to May 2016. Sales are shown before tax. The aim is to show which products to protect, reprice, or review, not just what sold.

$19.9M
Sales across 227 products

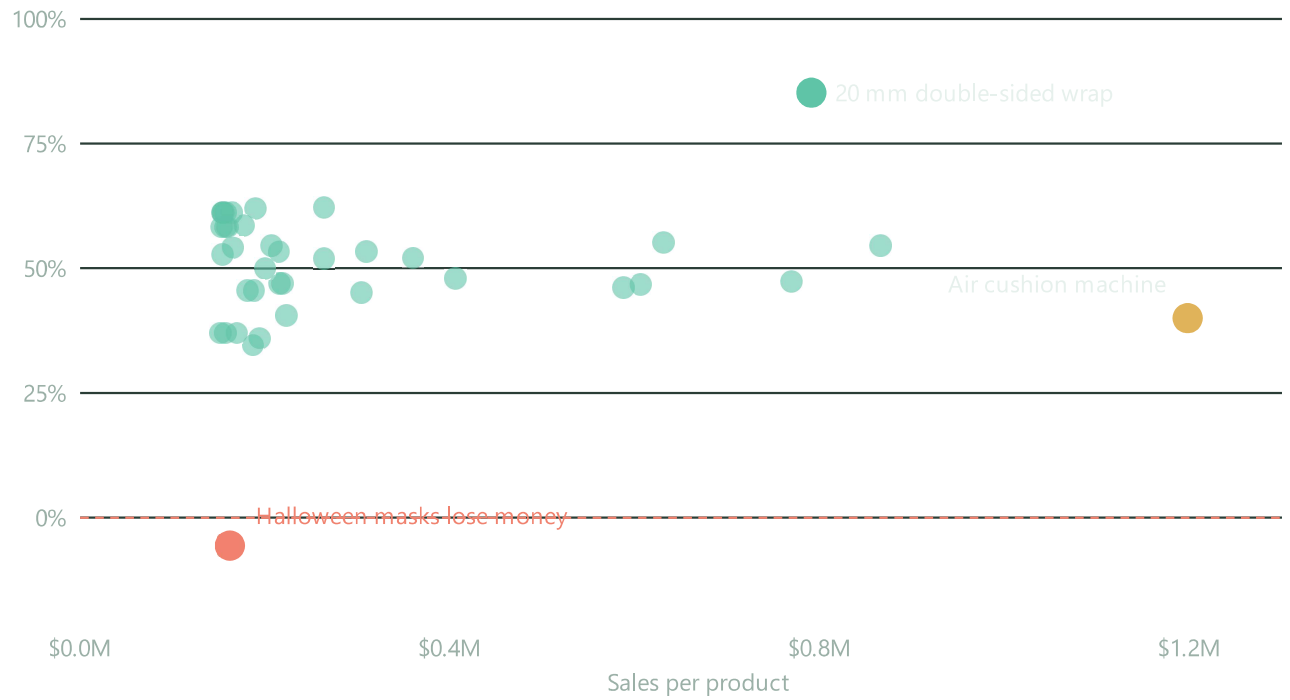

49.9%
Overall profit margin

33%
of sales come from the top 10 products

90%
of all losses come from 5 products

Sales vs. margin, top 40 products

Each dot is a product. Far right means high sales; high up means high margin.

How concentrated are sales?

Smallest group of products needed to reach each share of sales.

10 products	33%
27 products	50%

68 products	80%
227 products	100%

About 30% of the range delivers 80% of sales. The rest is a long tail.

Top 6 products by sales

Sales and margin side by side show which top sellers are also profitable.

Product	Sales	Profit	Margin
Air cushion machine (Blue)	$1.20M	$0.48M	40%
10 mm Anti static bubble wrap (Blue) 50m	$0.87M	$0.47M	55%
20 mm Double sided bubble wrap 50m	$0.79M	$0.67M	85%
32 mm Double sided bubble wrap 50m	$0.77M	$0.36M	47%
32 mm Anti static bubble wrap (Blue) 50m	$0.63M	$0.35M	55%
10 mm Double sided bubble wrap 50m	$0.61M	$0.28M	47%

What I would do next

Review the Halloween zombie masks

They sell well ($130K–$162K per size) but lose about 6% on every sale. The four sizes lost about $33K together. Check whether this was a clearance discount or a pricing error.

Reprice or renegotiate the air cushion machine

It is the top seller but has the lowest margin of the top five (40%). A small price rise here moves total profit more than anywhere else.

Learn from the 20 mm double-sided wrap

It earns 85% margin, while the 10 mm and 32 mm versions of the same product earn 47%. Find out whether price or cost explains the gap.

Source: FactSale and DimStockItem tables, cleaned in Excel. Losses are small overall ($40.5K against $9.9M profit) but concentrated, which is why they are easy to fix. Margin = profit ÷ sales excluding tax. This page was built as a design example of a product-focused view.
